

Prism — Demo Script (1–3 minutes)

Record this exact flow. It hits numeric exactness, domain switch, **live upload**, water-conservation callout, and multi-format render.

Setup before recording

1. Ollama running; generation model loaded (qwen2.5:7b-instruct).
2. API: `uv run uvicorn prism.api.main:app --port 8000`
3. UI: `cd frontend; npm run dev` → `http://localhost:5173`
4. Start on the **landing page**, then enter chat. Full screen. Hide personal desktop clutter.
5. Have a small markdown/PDF on the desktop (e.g. a one-page “Orion travel policy” with a Rs.3,250 per-diem).

Script (~2:20)

0:00–0:20 — Hook (lead with the upload)

Landing: “One query, any format.” Click **Try the live demo**.

Drop `orion_travel_policy.md` onto the composer. Wait for the “active” chip.

Ask: According to this document, who approves a claim of INR 45,000?

Expect: domain chip **uploaded doc**, “department head”, source upload://....

Voiceover: “A sixth domain that exists only for this chat — parsed, embedded, and answered locally.

Delete the session and the vectors go with it.”

0:20–0:45 — Finance exactness (five KBs still work)

New conversation. Ask: An employee submits an expense claim for Rs.15,000. Who needs to approve it?

Expect: Reporting Manager, band Rs.5,001–Rs.25,000, Finance chip.

0:45–1:10 — Domain switch + water callout

Ask: My toilet is occasionally leaking or running – what should I check?

Expect: Customer Support chip, trip-lever / flapper steps, **green water-conservation callout** with EPA liters/day.

Voiceover: “Mid-conversation domain switch — and a labeled water-waste estimate from published EPA figures, not the model.”

1:10–1:25 — Anaphora

Ask: actually is that covered under warranty

Expect: a warranty-aware follow-up, not a repeat of the flapper steps.

1:25–1:55 — One answer, five formats

On the Finance or Support answer: **Prose** → **JSON** → **XML** → **Excel download** → **Email**.

Voiceover: “Same canonical object — no re-retrieval.”

1:55–2:10 — Close

“Runs fully local on Ollama within 8GB VRAM. Prism — one query, any format.”

Checklist while editing

- ☐ Landing page in the first 10 seconds
- ☐ Upload chip “active” + “Local only · purged with this chat”
- ☐ Water callout visible
- ☐ Session title auto-updating
- ☐ Excel actually downloading
- ☐ Caption: “Academic case study · synthetic HR/Finance · real Kohler Support/Privacy/Legal · uploads stay on-device”

Checklist while editing

- ☐ Show session title auto-updating after first turn
- ☐ Show sources under an assistant bubble
- ☐ Show Excel actually downloading
- ☐ No long silent waits — cut dead air while the model thinks
- ☐ Caption: “Academic case study · synthetic HR/Finance · real Kohler Support/Privacy/Legal”

Upload

Upload to YouTube/Drive unlisted; put the link in README under **Demo video**.
