

Slide 1 — Approach & Pitch

Title: Prism — One query, any format

Subtitle: Kohler Unified Enterprise AI Agent · Track 3

- One conversational agent across **five domains** plus a **session-scoped 6th**: HR · Finance · Customer Support · Privacy · Legal · *your uploaded file*
- **3 real / 2 synthetic** knowledge sources — real public Kohler Support/Privacy/Legal; synthetic Meridian Fixtures HR & Finance (disclosed)
- Innovation beats: **non-LLM domain routing**, **canonical answer** → **five renderers**, **ephemeral local uploads**, **honest no-answer**
- Aligns with Kohler design excellence & operational efficiency: one agent, less tool sprawl, grounded answers, data stays on-device

An employee submits an expense claim

HR Finance Customer Support Privacy Legal

An employee submits an expense claim for exactly ₹25,001. Who needs to approve it?

A claim of ₹25,001 falls in the ₹25,001 to ₹100,000 band and requires Department Head sign-off in addition to the Reporting Manager.

- Claim amount: ₹25,001
- Approval band: ₹25,001 to ₹100,000
- Required approval: Department Head sign-off (in addition to Reporting Manager)

Note: Approval authority looked up from Finance Policy Section 2.1 bands in code (total claim value, not line items).

Sources: data/synthetic/finance_policy.md

Finance High Confidence

What about a claim for exactly ₹24,999 instead?

A claim of ₹24,999 falls in the ₹5,001 to ₹25,000 band and requires Reporting Manager sign-off.

- Claim amount: ₹24,999
- Approval band: ₹5,001 to ₹25,000
- Required approval: Reporting Manager sign-off

Note: Approval authority looked up from Finance Policy Section 2.1 bands in code (total claim value, not line items).

Sources: data/synthetic/finance_policy.md

Finance High Confidence

Slide 2 — Five-domain RAG core

Title: Architecture · eval

```
User → FastAPI + React
  ↓ guards (jailbreak, policy math)
  ↓ uploaded-doc gate (session Chroma, never the five KBs)
  ↓ Domain router (anchors + hit votes) ← no LLM
  ↓ Hybrid retrieve (Chroma + BM25 → RRF)
  ↓ One CanonicalAnswer (qwen2.5:7b local)
  ↓ Renderers: prose | JSON | XML | Excel | email
```

- Routing **92.1%** · Hit@5 **100%** · stress harness 39 black-box cases
 - Multi-turn session: sticky domain, anaphora + focus retrieval, clarification
-

Slide 3 — What's novel here

Title: Ad-hoc documents + water conservation (the 45% / 10%)

- **Bring your own document.** PDF / DOCX / TXT / CSV ingested mid-chat into a *separate* Chroma collection tagged by `session_id`. Answers from the file sit beside the five KBs. Vectors and files are **purged on session delete / 24h TTL** — they never leave the laptop. That is the privacy story, not a limitation.
 - **EPA water-waste callout.** Leak / drip / running-toilet Support answers get a labeled liters/day estimate from published WaterSense / Fix-a-Leak figures — same deterministic pattern as leave and Rs.-band math. Kohler's sustainability line, visible on the answer, not inferred.
 - Same object still re-renders as JSON / Excel / a ready-to-send email.
-

Slide 4 — Stack · VRAM · shipped

Title: Stack · sized for RTX 5070 8GB

Layer	Choice
Generation	qwen2.5:7b-instruct Q4 via Ollama
Embeddings	nomic-embed-text
Vector store	Embedded Chroma prism_kb + BM25; uploads in prism_uploads
Agent	Hand-rolled Python state machine
API / UI	FastAPI · React + Vite · landing + format bar

Constraint-driven: no multi-LLM routing, no cloud, reformats cost \$0 LLM.

Ask: Prism as the internal+external knowledge front door — five domains, one upload, any format, on-device.
