

Prism — Presentation Deck (max 4 slides)

Copy each slide into PowerPoint / Google Slides / Canva. Keep to **four slides**. Export PDF for the repo.

Slide 1 — Approach & Pitch

Title: Prism — One query, any format

Subtitle: Kohler Unified Enterprise AI Agent · Track 3

- One conversational agent across **five domains**: HR · Finance · Customer Support · Privacy · Legal/Compliance
 - **3 real / 2 synthetic** knowledge sources — real public Kohler Support/Privacy/Legal; synthetic Meridian Fixtures HR & Finance (disclosed) because no internal manuals are public
 - Innovation beats: **non-LLM domain routing**, **canonical answer object** with five renderers, **honest no-answer** for Legal/Privacy
 - Aligns with Kohler design excellence & operational efficiency: one agent, less tool sprawl, grounded answers, local-first (data stays on-device)
-

Slide 2 — System Architecture

Title: Architecture

```
User → FastAPI + React UI
      ↓
  Intent detect (reformat? clarify reply?)
      ↓
Domain router (embedding anchors + hit votes) ← no LLM
      ↓
Hybrid retrieve (Chroma dense + BM25 → RRF)
      ↓
One CanonicalAnswer (single local LLM call)
      ↓
Renderers: prose | JSON | XML | Excel | email
```

- Multi-turn SessionState: history, last docs, last answer, pending clarification
 - Domain switch + anaphora without restarting the session
-

Slide 3 — Tech Stack (8GB VRAM budget)

Title: Stack · sized for RTX 5070 8GB

Layer	Choice
Generation	Q4 7–8B via Ollama (benchmarked; see decisions.md)
Embeddings	nomic-embed-text (tiny / shared budget)
Vector store	Embedded Chroma + BM25 sidecar · one tagged collection
Agent	Hand-rolled Python state machine
API / UI	FastAPI · React + Vite
Ingest	__NEXT_DATA__ parse for Assist; curl_cffi for kohler.com

Constraint-driven: no multi-LLM routing, no separate vector DB server, reformats cost \$0 LLM.

Slide 4 — Innovation & Impact

Title: Why this wins the evaluation criteria

- **Approach (45%):** Canonical answer + renderer split; embedding-router instead of an LLM classifier; clarification & no-answer honesty
- **Execution (25%):** Full Assist scrape (~330 unique articles), validated samples/domain, hybrid retrieval, local reproducible index
- **UX (20%):** Session sidebar, auto-titles, format bar, Excel download, source citations
- **Business (10%):** Fewer handoffs between HR/Finance/Support/Legal tools; grounded compliance answers; water/product support knowledge retained from real Assist content

Ask: Deploy Prism as the internal+external knowledge front door — one chat, five domains, any output format.
